Amplify Science

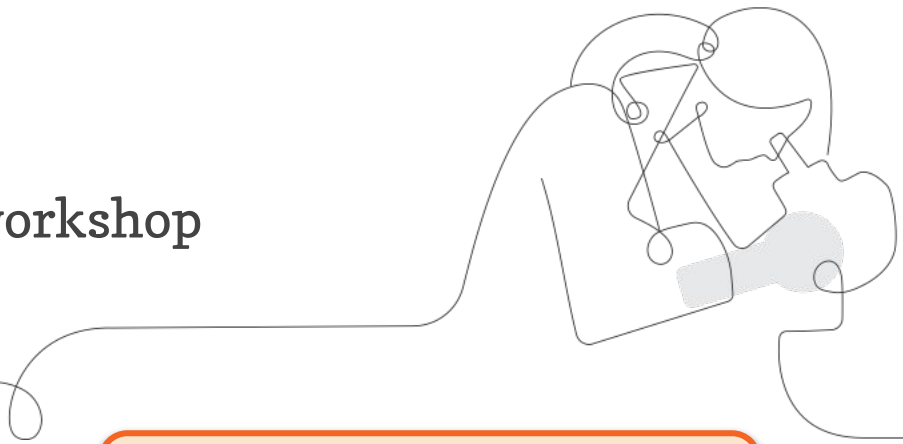

Unit Internalization & Guided Planning

Deep-dive and strengthening workshop
Grade 6, Metabolism

LAUSD

10/10/2020

Presented by Your Name

In a new tab, please log in to
your Amplify Science account
through Schoology.

Norms: Establishing a Culture of Learners

- Please keep your camera on, if possible.
- Take some time to orient yourself to the platform
 - *“where’s the chat box? what are these squares at the top of my screen?, where’s the mute button?”*

- Mute your microphone to reduce background noise unless sharing with the group

- The chat box is available for posting questions or responses to during the training

- Make sure you have a note-catcher present

- Be an active participant - chat, ask questions, discuss, share!

Workshop goals

By the end of this workshop, you will be able to:

- Internalize your upcoming unit.
- Plan for collecting evidence of student learning in order to make instructional decisions to support diverse learner needs.
- Gather resources to develop a multi-day plan for implementing Amplify Science within your class schedule and instructional format.

Standard Amplify Science Curriculum

On the standard Amplify Science platform you will find key lesson level information.

We will be navigating to lessons during today's workshop in order to better plan for collecting evidence of student learning in order to plan to meet the needs of diverse learners.

The screenshot shows the Amplify Science platform interface for Lesson 1.2: Welcome to Medical School. The top navigation bar includes the Amplify Science logo and breadcrumb navigation: Metabolism > Chapter 1 > Lesson 1.2. The main header features a colorful abstract illustration of a person's face and a stethoscope, with the text "Lesson 1.2: Welcome to Medical School" overlaid. Below the header is a horizontal navigation bar with five tabs: Lesson Brief (4 Activities), Teacher (Introducing Medical Student Role), 1 Warm-Up (Warm-Up), 2 SIM (Introducing the Metabolism Simulation), 3 Teacher-Led Discussion (Returning to the Patient), and 4 Homework (Homework). The main content area is divided into three columns. The left column contains a sidebar with links: Overview, Materials & Preparation, Differentiation, Standards, Vocabulary, and Unplugged?. The middle column is titled "Overview" and contains text about the unit's start, an anchor phenomenon, and student learning goals. The right column is titled "Digital Resources" and lists links for Classroom Slides 1.2 (PowerPoint and Google Slides), All Projections, Video: Elisa's Condition, Completed Scientific Argumentation Wall Diagram, and Metabolism Investigation Notebook, pages 5-. A yellow callout box is overlaid on the right side of the page, containing the text: "Skip slide if modeling live on the platform." At the bottom left, there is a "Español" button, and at the bottom right, there is a chat icon.

RESET LESSON

GENERATE PRINTABLE LESSON GUIDE

Overview

Students begin the unit by viewing a dramatic video that immerses them in their new role as medical students. Students build on the video by brainstorming initial thoughts about why their patient, Elisa, could be feeling so tired. The teacher helps the class to create plausible alternative claims from these initial ideas. Students are then introduced to the *Metabolism* Simulation, and they begin to observe how molecules travel through systems in a healthy body. The purpose of this lesson is to help students begin to make connections between macro-effects, such as how tired someone feels, and the microscopic world of metabolism—the body's use of molecules for energy and growth.

Anchor Phenomenon: Elisa, a young patient, feels tired.

Students learn:

- The body takes in molecules by eating and breathing.
- Some of these molecules travel to the cells of the body.

Lesson at a Glance

(Teacher Only) Introducing Medical Student Role (5 min.)
An introductory video plunges students into their new students and introduces them to their patient, a teenage girl who is tired all the time.

1: Warm-Up (5 min.)

Metabolism Planning for the Unit

Unit Map

Unit Map

What is causing Elisa, a young patient, to feel tired all the time?

Through inhabiting the role of medical students in a hospital, students are able to draw the connections between the large-scale, macro-level experiences of the body and the micro-level processes that make the body function as they first diagnose a patient and then analyze the metabolism of world-class athletes. They uncover how body systems work together to bring molecules from food and air to the trillions of cells in the human body.

Chapter 1: Why does Elisa feel tired all the time?

Students figure out: Elisa is tired because her cells aren't getting the molecules they need from food and air, which are necessary for her cells to function, grow, and repair.

How they figure it out: They make observations in the Simulation and read a short article to discover which molecules are taken in by the cells.

Chapter 2: What is happening in Elisa's body that could be preventing molecules from getting to her cells?

Students figure out: Elisa's cells are getting enough oxygen and amino acids, but not enough glucose. Her digestive system should break down starch molecules into glucose molecules, which are small enough to get into cells, and her circulatory system should deliver the glucose to cells. Students diagnose Elisa with diabetes.

How they figure it out: They explore several medical conditions with the Sim and through text. They conduct a hands-on investigation and participate in a Classroom Body Systems Model. They explain how diabetes affects Elisa's body systems and the molecules that get to her cells.

Chapter 3: How do molecules in the cells of the body release energy?

Students figure out: Elisa feels tired because her cells need both glucose and oxygen to release energy, in a process called cellular respiration.

How they figure it out: They explore the effects of activity on their own bodies, observe a chemical reaction that represents a model of cellular respiration, read an article, and conduct additional investigations in the Simulation.

Chapter 4: Students apply what they learn to a new question—How did the athlete increase his cellular respiration and improve his performance?

Students consider cellular respiration in the context of high-performance athletes, and read an article about a controversial practice called blood doping, which is used to enhance athletic performance. Jordan Jones finished 35th in a competitive bike race last year and 1st in a similar race this year. Was he blood doping? Students consider alternative claims and review the available evidence to make an argument. They engage in oral argumentation in a student-led discourse routine called a Science Seminar and then individually write their final arguments.

Unit Guide resources

Once a unit is selected, select **JUMP DOWN TO UNIT GUIDE** in order to access all unit-level resources in an Amplify Science unit.

Planning for the unit

Unit Overview	Describes what's in each unit, the rationale, and how students learn across chapters
Unit Map	Provides an overview of what students figure out in each chapter, and how they figure it out
Progress Build	Explains the learning progression of ideas students figure out in the unit
Getting Ready to Teach	Provides tips for effectively preparing to teach and teaching the unit in your classroom
Materials and Preparation	Lists materials included in the unit's kit, items to be provided by the teacher, and briefly outlines preparation requirements for each lesson
Science Background	Adult-level primer on the science content students figure out in the unit
Standards at a Glance	Lists Next Generation Science Standards (NGSS) (Performance Expectations, Science and Engineering Practices, Disciplinary Core Ideas, and Crosscutting Concepts), Common Core State Standards for English Language Arts, and Common Core State Standards for Mathematics

Teacher references

Lesson Overview Compilation	Lesson Overview of each lesson in the unit, including lesson summary, activity purposes, and timing
Standards and Goals	Lists NGSS (Science and Engineering Practices, Disciplinary Core Ideas, and Crosscutting Concepts) and CCSS (English Language Arts and Mathematics) in the unit, explains how the standards are reached
3-D Statements	Describes 3-D learning across the unit, chapters, and in individual lessons
Assessment System	Describes components of the Amplify Science Assessment System, identifies each 3-D assessment opportunity in the unit
Embedded Formative Assessments	Includes full text of formative assessments in the unit
Books in This Unit	Summarizes each unit text and explains how the text supports instruction
Apps in This Unit	Outlines functionality of digital tools and how students use them (in grades 2-5)

Printable resources

Copymaster Compilation	Compilation of all copymasters for the teacher to print and copy throughout the unit
Investigation Notebook	Digital version of the Investigation Notebook, for copying and projecting
Multi-Language Glossary	Glossary of unit vocabulary in multiple languages
Print Materials (8.5" x 11")	Digital compilation of printed cards (i.e. vocabulary cards, student card sets) provided in the kit
Print Materials (11" x 17")	Digital compilation of printed Unit Question, Chapter Questions, and Key Concepts provided in the kit

Guided Unit Internalization

Part 1: Unit-level internalization

Unit title: Metabolism

What is the phenomenon students are investigating in your unit?

What is causing Elisa, a young patient in the hospital, to feel tired all of the time?

Unit Question:

How do the trillions of cells in the human body get what they need to function, and what do the cells do with the things they absorb?

Student role:

Medical students

By the end of the unit, students figure out ...

Cells need oxygen, glucose and amino acids from outside the body. The digestive system creates glucose and amino acids while the respiratory system brings in oxygen which is carried through the body by the circulatory system. When glucose and oxygen are both in a cell, they undergo a chemical reaction, called cellular respiration which releases energy. Cells use this energy to function which allows the entire body to function.

What science ideas do students need to figure out in order to explain the phenomenon?

Students need to be able to draw connections between the large-scale, macro-level experiences of the body and the micro-level processes that make the body function. They need to understand how the body systems work together to bring molecules from food and air to the trillions of cells in the human body.

Lesson 1.1: Pre-Unit Assessment

SETTINGS

1

Lesson 1.2: Welcome to Medical School

Lesson 1.3: Evaluating Initial Claims About Elisa

Key Activities

- **Introducing the *Metabolism* Unit:** Students are introduced to the unit problem and their role as medical students. They consider their initial ideas about why their patient Elisa is feeling tired all the time, and are introduced to the claims they will be investigating.
- **Do:** Students are introduced to the *Metabolism* Simulation (Sim) and observe what happens to molecules the body is taking in. Students using @Home Slides use the Sim, while students using @Home packets observe a video of a Sim investigation.
- **Reflect:** Students consider whether they have any new ideas about the claims.

Ideas for synchronous or in-person instruction

Before meeting, have students watch the introductory video. While meeting, have students share their initial ideas about Elisa's condition, then introduce the Sim. You can either have students complete the Sim investigation individually, then share observations as a class, or have students observe and record as you show the Sim. If you are meeting in person with students who don't have digital access at home, take the opportunity to have them complete the Sim investigation in class (as in *Metabolism*, Lesson 1.2, Activity 2).

The background is a complex, abstract composition. On the right side, there is a stylized, high-contrast face in profile, rendered in shades of yellow and orange. The face has a large, detailed eye and a sharp nose. To the left of the face, there are various geometric shapes, including hexagons and a triangle, in colors like blue, red, and purple. Overlaid on these shapes are several thin, dark red lines that form a network of loops and curves, resembling a molecular or biological structure. The overall color palette is dominated by warm tones like orange, yellow, and red, with cooler tones like blue and purple providing contrast.

Metabolism

@Home Lesson 1

Today, we will begin a new unit called ***Metabolism***.

We will begin by watching a video that introduces you to the problem you will solve in this unit and your new role as **medical students**.

Think about this question.

Why do you think your new patient, Elisa, is feeling tired all the time?

Claims

Elisa is feeling tired because she:

- is not getting enough sleep.
- is not eating enough food or not eating the right foods.
- has a medical condition.

You probably thought of some of these ideas.

These are possible **claims**. As medical students, you will investigate these claims to try to explain why Elisa's body isn't functioning properly.

To figure out why Elisa feels so tired, we will first think about healthy bodies.

What are some things you know the human body needs to function?

Key Activities

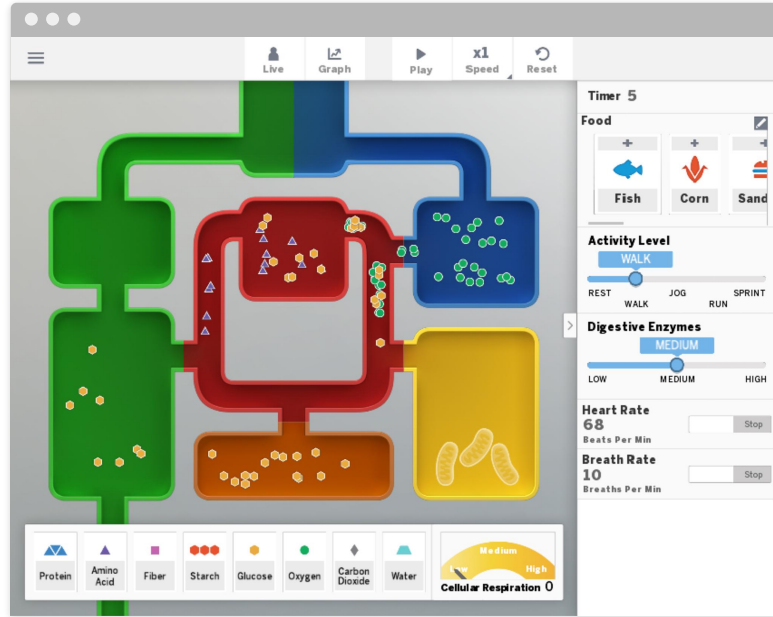

- **Introducing the *Metabolism* Unit:** Students are introduced to the unit problem and their role as medical students. They consider their initial ideas about why their patient Elisa is feeling tired all the time, and are introduced to the claims they will be investigating.
- **Do:** Students are introduced to the *Metabolism* Simulation (Sim) and observe what happens to molecules the body is taking in. Students using @Home Slides use the Sim, while students using @Home packets observe a video of a Sim investigation.
- **Reflect:** Students consider whether they have any new ideas about the claims.

Ideas for synchronous or in-person instruction

Before meeting, have students watch the introductory video. While meeting, have students share their initial ideas about Elisa's condition, then introduce the Sim. You can either have students complete the Sim investigation individually, then share observations as a class, or have students observe and record as you show the Sim. If you are meeting in person with students who don't have digital access at home, take the opportunity to have them complete the Sim investigation in class (as in *Metabolism*, Lesson 1.2, Activity 2).

A lot of things that happen in the human body are hidden or too small to directly observe. We will use the *Metabolism* Simulation to help us learn more about how human body systems function.

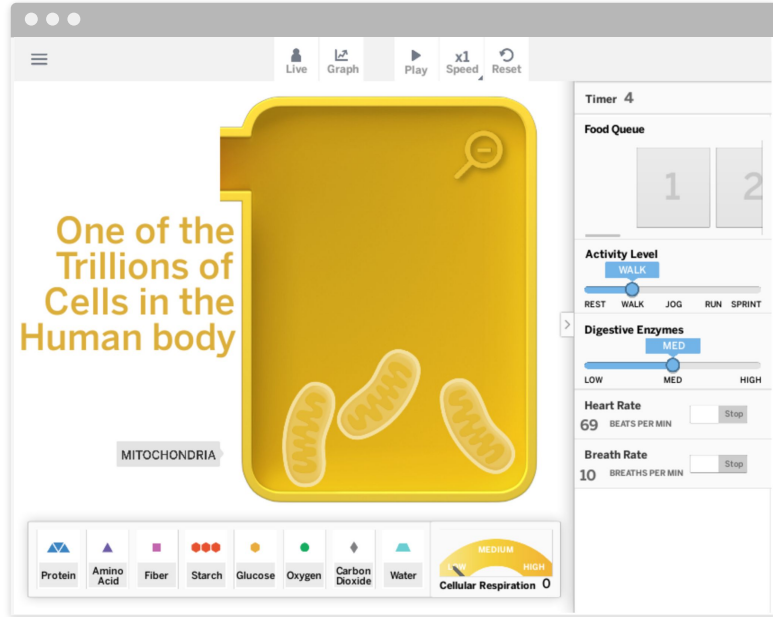

The *Metabolism* Sim is a scientific model that simulates many things that happen inside the human body.

Next you will watch a video about how to use the Sim.

You can also stop the
body's **heart**

Check with your teacher about how you will access Sims and other digital tools in this @Home Unit.

Think about this question.

Which **molecules** enter the cell?

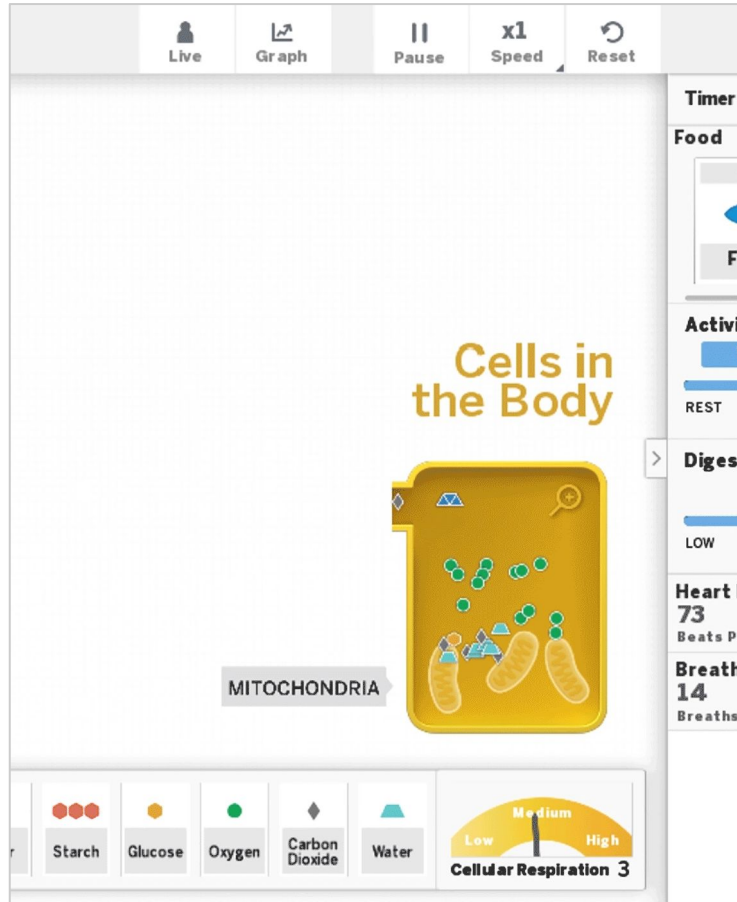

There are certain things we already know the human body needs to function. Two important things the human body needs to survive are **food** and **air**.

As you explore the *Metabolism* Sim, you will **watch what happens to the food and air** that enter this healthy Simulation body.

One thing you will observe is what is happening in the **cells** of the body. We know that our bodies are made of **trillions of cells**.

The Sim shows only one representative cell. We can learn about what all cells need by observing this cell in the Sim.

You will observe **which molecules** are entering the cell.

You can zoom into this cell by pressing on the cell and then on the magnifying glass.

Name: _____ Date: _____

Observing Molecules in the Sim

1. Launch the *Metabolism* Simulation.
2. Select HEALTHY BODY from the menu.
3. Select OBSERVE.
4. Feed the body.

As you watch the Sim investigation, record your observations:

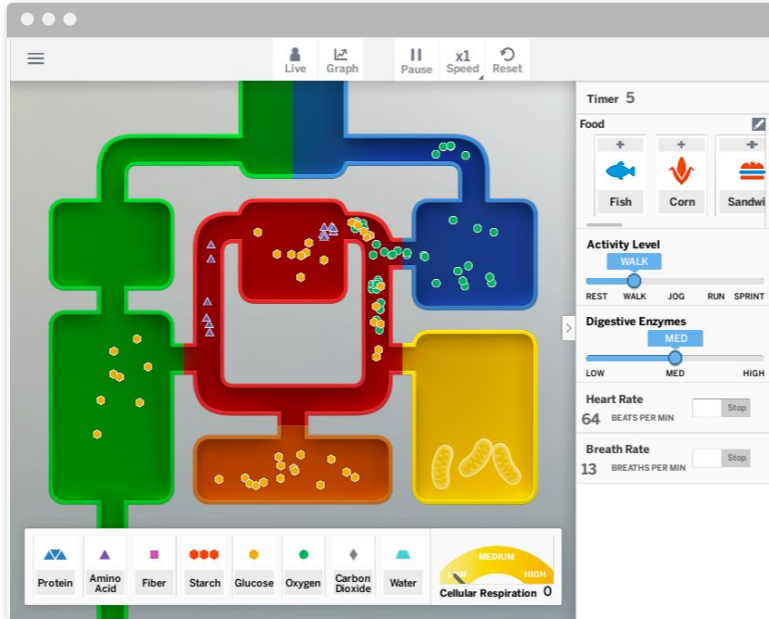

What happens to the food and air that enter this healthy Simulation body?

Which molecules are entering the cell?

Go to the **Observing Molecules in the Sim** page.

Use the Sim to observe and record what happens to the **food and air** that enter the body, and which **molecules** are entering the cells.

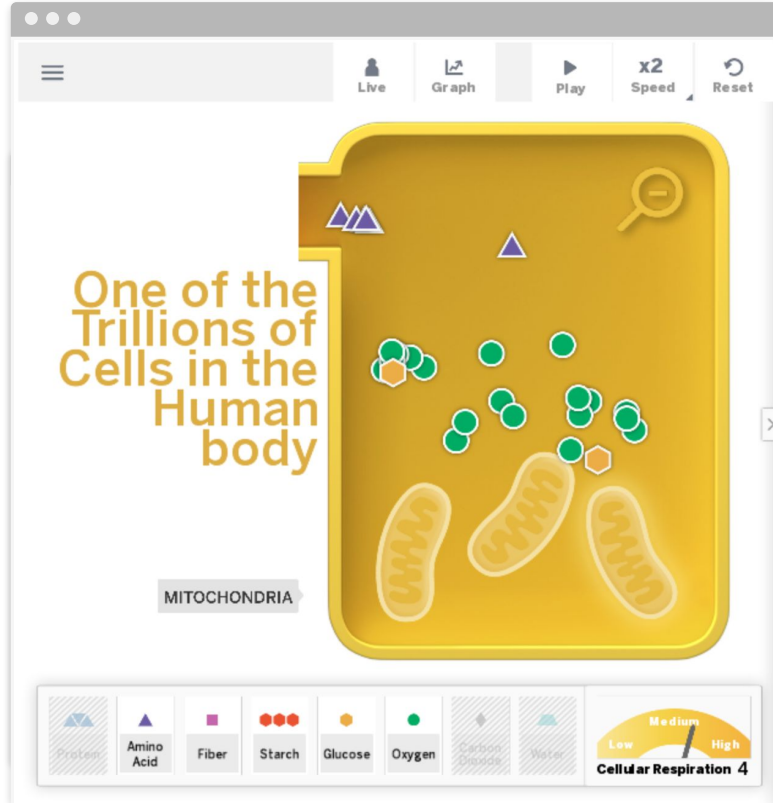

Think about this question.

What did you notice happens to the **food and air** that enter this healthy Simulation body?

You may have noticed that:

- air has oxygen molecules
- food breaks down into different molecules
- some molecules from food and air go into the yellow box representing one of the trillions of cells in the human body.

You probably noticed that these molecules enter the cell:

- glucose (from food)
- amino acids (from food)
- oxygen (from air)

Key Activities

- **Introducing the *Metabolism* Unit:** Students are introduced to the unit problem and their role as medical students. They consider their initial ideas about why their patient Elisa is feeling tired all the time, and are introduced to the claims they will be investigating.
- **Do:** Students are introduced to the *Metabolism* Simulation (Sim) and observe what happens to molecules the body is taking in. Students using @Home Slides use the Sim, while students using @Home packets observe a video of a Sim investigation.
- **Reflect:** Students consider whether they have any new ideas about the claims.

Ideas for synchronous or in-person instruction

Before meeting, have students watch the introductory video. While meeting, have students share their initial ideas about Elisa's condition, then introduce the Sim. You can either have students complete the Sim investigation individually, then share observations as a class, or have students observe and record as you show the Sim. If you are meeting in person with students who don't have digital access at home, take the opportunity to have them complete the Sim investigation in class (as in *Metabolism*, Lesson 1.2, Activity 2).

In the *Metabolism* unit we will be thinking about this question:

Unit Question

How do the trillions of cells in the human body get what they need to function, and what do the cells do with the things they absorb?

Investigating this Chapter Question will help us answer the Unit Question.

Chapter 1 Question

Why does Elisa feel tired all the time?

Here is an important word you will learn more about in this unit.

metabolism

the body's use of molecules for energy and growth

In this lesson and throughout the unit you will need to **access different pages** such as the Glossary on the next slide. Check with your teacher about how you will access materials and complete and submit work in this @Home Unit.

Metabolism Glossary

amino acids: molecules that are the building blocks of proteins
aminoácidos: moléculas que son los componentes fundamentales de las proteínas

carbon dioxide: a molecule made of carbon and oxygen atoms
dóxido de carbono: una molécula hecha de átomos de carbono y oxígeno

cellular respiration: the chemical reaction between oxygen and glucose that releases energy into cells
respiración celular: la reacción química entre oxígeno y glucosa que libera energía en las células

chemical reaction: a process in which atoms rearrange to form new substances
reacción química: un proceso en el que los átomos se reorganizan para formar nuevas sustancias

circulatory system: the body system that transports molecules to and from all cells of the body
sistema circulatorio: el sistema que transporta moléculas desde y hacia todas las células del cuerpo

claim: a proposed answer to a question about the natural world
afirmación: una respuesta propuesta a una pregunta sobre el mundo natural

digestive system: the body system that takes in food and breaks it down
sistema digestivo: el sistema del cuerpo que toma alimento por dentro y lo desintegra

energy: the ability to make things move or change
energía: la capacidad de hacer que las cosas se muevan o cambien

evidence: information about the natural world that is used to support or go against (refute) a claim
evidencia: información sobre el mundo natural que se utiliza para respaldar o rechazar (refutar) una afirmación

glucose: a molecule that organisms can use to release energy, and that is made of carbon, hydrogen, and oxygen atoms
glucosa: una molécula que los organismos pueden usar para liberar energía y que está hecha de átomos de carbono, hidrógeno y oxígeno

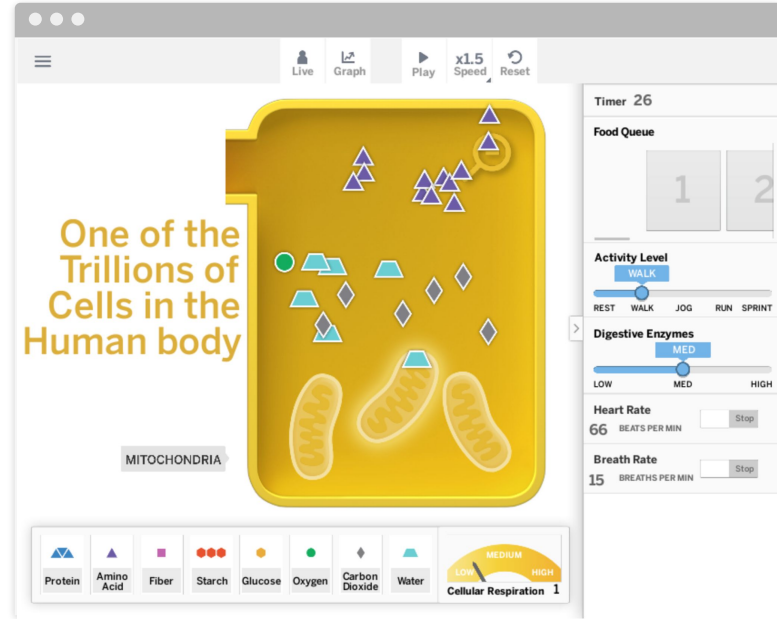

metabolism: the body's use of molecules for energy and growth
metabolismo: el uso de moléculas por el cuerpo para obtener energía y crecer

molecule: a group of atoms joined together in a particular way
molécula: un grupo de átomos unidos de una manera particular

Metabolism @Home Lesson 1

Metabolism @Home Lesson 1
© 2020 The Regents of the University of California. All rights reserved.

Throughout the year, you can look up vocabulary words in the **glossary** to help you understand what they mean. You can find this in your student sheets or in the [Amplify Library](#).

In the Sim, you observed that in a functioning, healthy body, certain **molecules that come from food and air** are transported into the body's **cells**.

Claims

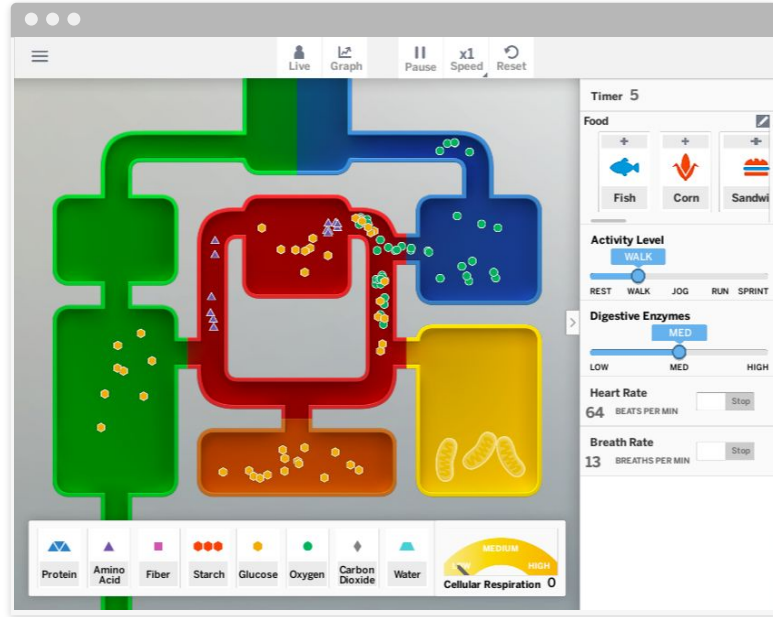

Elisa is feeling tired because she:

- is not getting enough sleep.
- is not eating enough food or not eating the right foods.
- has a medical condition.

Remember the claims about why Elisa is feeling tired.

Do you have any **new insights or changes in thinking** about these claims after observing the Sim?

We will be investigating whether Elisa's problem is related to the **molecules** she is taking in from the **environment** and/or what is happening in the **cells** in her body.

In this unit, we will continue to learn more about how the **cells of the body** use these molecules for **energy and growth**, allowing the whole body to **function**.

Studying how these processes work in a healthy, functioning body will help us figure out what might be going on in Elisa's body.

Key Activities

- **Introducing the *Metabolism* Unit:** Students are introduced to the unit problem and their role as medical students. They consider their initial ideas about why their patient Elisa is feeling tired all the time, and are introduced to the claims they will be investigating.
- **Do:** Students are introduced to the *Metabolism* Simulation (Sim) and observe what happens to molecules the body is taking in. Students using @Home Slides use the Sim, while students using @Home packets observe a video of a Sim investigation.
- **Reflect:** Students consider whether they have any new ideas about the claims.

Ideas for synchronous or in-person instruction

Before meeting, have students watch the introductory video. While meeting, have students share their initial ideas about Elisa's condition, then introduce the Sim. You can either have students complete the Sim investigation individually, then share observations as a class, or have students observe and record as you show the Sim. If you are meeting in person with students who don't have digital access at home, take the opportunity to have them complete the Sim investigation in class (as in *Metabolism*, Lesson 1.2, Activity 2).

Suggestions for Online Synchronous Time

Online synchronous time

Online discussions: It's worthwhile to establish norms and routines for online discussions in science to ensure equity of voice, turn-taking, etc.

Digital tool demonstrations: You can share your screen and demonstrate, or invite your students to share their screen and think-aloud as they use a Simulation or other digital tool.

Interactive read-alouds: Screen share a digital book or article, and pause to ask questions and invite discussion as you would in the classroom.

Shared Writing: This is a great opportunity for a collaborative document that all your students can contribute to.

Co-constructed class charts: You can create digital charts, or create physical charts in your home with student input.

Day 1: @Home Lesson 1

Minutes for science: 15 min

Instructional format:

Asynchronous

Synchronous

Lesson or part of lesson:

@Home Lesson 1, video (slides 1-4)

Mode of instruction:

Preview

Review

Teach full lesson live

Teach using synchronous suggestions

Students work independently using:

☐ @Home Packet

☒ @Home Slides and @Home Student Sheets

☐ @Home Videos

Students will...

view the video and jot down their initial ideas about what could be causing Elisa to feel tired all the time.

Teacher will...

assign slides 1-4 in Schoology and provide direction for students to jot down their ideas when they get to slide 4 to share during the next lesson.

Minutes for science: _____

Instructional format:

Asynchronous

Synchronous

Lesson or part of lesson:

Mode of instruction:

Preview

Review

Teach full lesson live

Teach using synchronous suggestions

Students work independently using:

Students will... view the video and jot down their initial ideas about what could be causing Elisa to feel tired all the time.	Teacher will... assign slides 1-4 in Schoology and provide direction for students to jot down their ideas when they get to slide 4 to share during the next lesson.	Students will... engage in a discussion about their initial ideas, be introduced to the claims they will investigate, explore the simulation, and reflect on learning.	Teacher will... lead students through the lesson activities using slides 4-28.

Look at the *Students will* columns. What are students working in the lesson(s) that you could collect, review, or provide feedback on?

See Some Types of Written Work in Amplify Science to the right for guidance.

If there isn't a work product listed above, do you want to add one? Make notes below.

Asynchronous: students jot notes about their initial ideas for why Elisa is feeling tired

Synchronous: record observations of molecules using the sim, jot new ideas about the claims after using the sim

How will students submit this work product to you?

See the Completing and Submitting Written Work tables to the right for guidance on how students can complete and submit work.

Asynchronous: students will bring handwritten notes to the synchronous lesson to share on a Jamboard and discuss

Synchronous: students will turn in the simulation worksheet in Schoology, and add new ideas to the Jamboard to reflect on their learning

Some Types of Written Work in Amplify Science

- Daily written reflections
- Homework tasks
- Investigation notebook pages
- Written explanations (typically at the end of Chapter)
- Diagrams
- Recording pages for Sim uses, investigations, etc

Completing Written Work

- Plain paper and pencil (videos include prompts for setup)
- (6-8) Student platform
- Investigation Notebook
- Record video or audio file describing work/answering prompt
- Teacher-created digital format (Google Classroom, etc)

Submitting Written Work

- Take a picture with a smartphone and email or text to teacher
- Through teacher-created digital format
- During in-school time (hybrid model) or lunch/materials pick-up times
- (6-8) Hand-in button on student platform

How will you differentiate this lesson for diverse learners? (Navigate to the lesson level on the standard Amplify Science platform and click on differentiation in the left menu.)

Chapter 1 Question

Why does Elisa feel tired all the time?

Key Concepts

1. A functioning human body has molecules from food (glucose and amino acids) and molecules from air (oxygen) in its cells.

Vocabulary

metabolism

glucose

molecule

oxygen

amino acid

18

ns. What are students working in the lesson(s) or provide feedback on?
mplify Science to the right for guidance.

above, do you want to add one? Make notes below.
jot notes about their initial ideas for

- I notice/observe ...
- I think this is important because ...
- I wonder ...

W have on a Jamboard and discuss

will turn in the simulation worksheet
w ideas to the Jamboard to reflect on

Some Types of Written Work in Amplify Science

- Daily written reflections
- Homework tasks
- Investigation notebook pages
- Written explanations (typically at the end of Chapter)

pages for Sim uses, investigations, etc

Written Work

and pencil
ude prompts

Submitting Written Work

- (6-8) Student platform
- Investigation Notebook
- Record video or audio file describing work/answering prompt
- Teacher-created digital format (Google Classroom, etc)

- Take a picture with a smartphone and email or text to teacher
- Through teacher-created digital format
- During in-school time (hybrid model) or lunch/materials pick-up times
- (6-8) Hand-in button on student platform

How will you differentiate this lesson for diverse learners? (Navigate to the lesson level on the standard Amplify Science platform and click on differentiation in the left menu.)

Supports:

- Make available the @Home Classroom Wall found in the @Home Student Packets to support discussions and writing. Students can add pictures to go with the vocabulary/key concepts to help them make meaning.
- Provide sentence starters for use in discussion and writing.

Extension:

- Write a critique of the simulation as a model of the human body.

Questions?

Plan for the day

- Framing the day
 - Amplify Science Refresher
 - Instructional Materials
- Unit Internalization
- Planning to teach
 - Collecting evidence of student learning to meet diverse learner needs
- **Reflection and closing**

During this workshop did we meet our objectives?

- Were you able to internalize your upcoming unit?
- Do you know how to plan for collecting evidence of student learning in order to make instructional decisions to support diverse learner needs?
- Do you have the resources you need to develop a multi-day plan for implementing Amplify Science within your class schedule and instructional format?

e

Upcoming LAUSD Office Hours

Bi-weekly through October

- Thursday, 10/15 (3-4pm)
- Thursday, 10/29 (3-4pm)

<https://tinyurl.com/6-8OfficeHours>

Program Hub: Self Study Resources

The screenshot displays the Amplify Science Program Hub. On the left is a sidebar with a hamburger menu icon circled in orange. Below it, a user greeting 'Hello Teacher Considine' is shown. Further down are links for 'Log Out', 'Go To My Account' with a gear icon, and a 'Classroom Language Settings' button. A grid of icons includes 'LA Science Program Guide', 'Program Hub' (highlighted with an orange arrow), 'Science Program Guide', 'FLORIDA EDITION Standards Map', a cartoon bear icon labeled 'Help', and a 'Microbiome' section with '11 Lessons'. The main content area features the 'AmplifyScience' logo and a 'Welcome' message. It lists several resource categories: 'Remote learning: Amplify Science@Home', 'Hands-on investigations support', 'Unit extensions' (circled in orange), and 'Using this site for self study' (circled in orange). Below these are links for 'Video Synopses', 'Video Pathway: Amplify Science K-5', and 'Video Pathway: Amplify Science 6-8'. Further down are 'Program Overview', 'Navigation and Materials', 'Planning', 'Student Assessments and Work', 'Unit Orientation Videos', and 'Support'. On the right side, a section titled 'Video Pathway: Amplify Science 6-8' explains the learning path: starting with 'Getting Started', moving to 'Main Topics', and finally 'Unit orientation videos'. It includes a 'Getting Started' list with '6-8 Program Overview' and '6-8 Navigation and logging in', a 'Main Topics' list with '6-8 Unit Level', '6-8 Chapter Level', and '6-8 Lesson Level', and a 'Unit Orientation Videos' list with 'Grade 6 Core: Metabolism', 'Grade 7 Core: Plate Motion', and 'Grade 8 Core: Force and Motion'. The footer contains the 'FUTURA FOOD ENGINEERING' logo and the URL 'https://www.amplify.com/floridastandards'.

AmplifyScience

Welcome to Amplify Science!

This site contains supporting resources designed for the Los Angeles Unified School District Amplify Science adoption for grades TK–8.

All LAUSD schools have access to Amplify Science resources at this time.

Click here for [Remote Learning Resources for Amplify Science](#)

[Click here](#) to go back to the LAUSD homepage.

Click the button below to preview the digital Teacher's Guide, and check back for exciting updates to this site!

Back to school national webinar series

Now-October, topics include:

- Remote and hybrid learning support
- Navigation support
- What's new for 2020-2021
- Planning support
- Curriculum overview

Additional Amplify Support

Customer Care

Seek information specific to enrollment and rosters, technical support, materials and kits, and teaching support, weekdays 7AM-7PM EST.

scihelp@amplify.com

800-823-1969

Amplify Chat

When contacting the customer care team:

- Identify yourself as an Amplify Science user.
- Note the unit you are teaching.
- Note the type of device you are using (Chromebook, iPad, Windows, laptop).
- Note the web browser you are using (Chrome or Safari).
- Include a screenshot of the problem, if possible.
- Copy your district or site IT contact on emails.

Smart Start Plans

Middle School Science Schoology Group

- Access code to join the Schoology Group: **SPG7G-K7BT9**
- Once in the group, you will find the Smart Start Plans under *resources*.

Day	Learning objective	What teacher does	What students do
Monday	Instructional Support Day		
Day 4	Synchronous (60 min)		
	1. Community Building (SEL) <ul style="list-style-type: none"> Creating a safe space for sharing on Zoom using Community Circle. 2. Aspects of Modeling: <ul style="list-style-type: none"> Deepen students' understanding of scientific models. (SEP Modeling) 3. Uploading Images to a Discussion <ul style="list-style-type: none"> Learn how to upload an image to a Schoology Discussion using a video tutorial. (Tool) 4. Introduce Initial Model Critique <ul style="list-style-type: none"> Critique a model of a classmate in a constructive way to promote collaboration and student discussion. (SEP Modeling) 	1. Community Building (SEL) <ul style="list-style-type: none"> The teacher will pose a question to students and have students respond in the Zoom chat. <i>Thinking about the world around you, name at least 2 instances where you observe science happening.</i> 2. Aspects of Modeling: <ul style="list-style-type: none"> Read article and watch video Students need to understand the role of modeling in science. 1. Uploading Images to a Discussion <ul style="list-style-type: none"> The teacher provides students the link to the informational video on "How to upload the image to Schoology discussion." 4. Introduce Initial Model Critique <ul style="list-style-type: none"> Using the Discussion and Writing Prompts PDF select sentence starters from pages 6 and 8 to have students use to critique the models of classmates. 	1. Community Building (SEL) <ul style="list-style-type: none"> Students will respond to the question posed by the teacher in the chat. 2. Aspects of Modeling <ul style="list-style-type: none"> Students will read this article and watch this video and answer questions in a Schoology Quiz in LAUSD MS Science Group: SPG7G-K7BT9) or in Google Docs. 3. Uploading Images to a Discussion <ul style="list-style-type: none"> Students will watch a tutorial on how to upload an image to a Schoology discussion. Students upload their initial model of the phenomenon to a Schoology discussion. 4. Introduce Initial Model Critique <ul style="list-style-type: none"> Students return to the Initial Model in Schoology Discussion and critique the model of at least 1 classmate.
Day 4	Asynchronous		
	Revise Initial Model: <ul style="list-style-type: none"> Apply understanding of modeling (SEP modeling) and students revise their initial model. 	Revise Initial Model: <ul style="list-style-type: none"> The teacher provides an opportunity for students to revise their initial model based on article and feedback. 	Revise Initial Model: <ul style="list-style-type: none"> Students will revisit their initial model and make edits based on critiques from classmates and the reading. Students will add an explanation of how their model changed and why they made the changes. Students upload their revised model to Schoology discussion.

Creating Assignments in Schoology

- Click Add Materials.
- Select Add Assignment.
- Fill out the Create Assignment form.
- Options. Use Options to turn on/off the following features: Use Individually Assign to only display the assignment to a specific member of the course or a grading group.
- Click Create to complete
