Remote Professional Learning Norms

Take some time to orient yourself to the platform

- *“Where’s the chat box? What are these squares at the top of my screen?, where’s the mute button?”*

Mute your microphone to reduce background noise unless sharing with the group

The chat box is available for posting questions or responses to during the training

Make sure you have a note-catcher present

Engage at your comfort level - chat, ask questions, discuss, share!

Use two windows for today's webinar

The image illustrates a dual-window setup for a webinar. Two windows are shown side-by-side, each with an orange border. An inset in the top-left corner shows a small window with three colored buttons (red, yellow, green) and an orange arrow pointing to the top-left corner of the windows.

Window #1 (left): A Google Meet window titled "Meet - Etiwanda Grade 7 N". The URL is meet.google.com/hcs-dxpk-wrm?aut.... The window shows a dark video feed area and a toolbar with 21 participants and a "You" profile.

Window #2 (right): An Amplify Science curriculum page titled "Lesson 1.2: Using Fossils to Understand Earth". The URL is apps.learning.amplify.com/curriculu.... The page features a large illustration of a blue dinosaur in a prehistoric landscape. The page content includes:

- Progress Build Level 1:** The Earth's entire outer layer (below the water and soil that we see) is made of solid rock that is divided into plates. Earth's plates can move.
- Progress Build Level 2:** The plates move on top of a soft, solid layer of rock called the mantle. At plate boundaries where the plates are moving away from each other, rock rises from the mantle and hardens, adding new solid rock to the edges of the plates. At plate boundaries where plates are moving toward each other, one plate moves underneath the other and sinks into the mantle.

The page also includes a sidebar with options like "Flexension Compilation", "Investigation Notebook", "NGSS Information for Parents and Guardians", "Print Materials (11" x 17")", and "Print Materials (8.5" x 11")". At the bottom, there are sections for "Lesson Brief (4 Activities)", "WARM-UP Warm-Up", "TEACHER Why Geologists Value Fossils", and "TEACHER-LED DISCUSSION Introducing Mesos".

Objectives

By the end of this 1-hour workshop, you will be able to...

- Describe how the Amplify Science approach to reading supports students in making sense of science ideas.
- Identify the different roles that text can play in figuring out science concepts.
- Be ready to teach specific reading strategies for diverse learners in a remote/hybrid instructional setting.

Lipase-Catalyzed Production of Biodiesel¹

Lloyd A. Nelson, Thomas A. Foglia*, and William N. Marmor

USDA, ARS, ERRC, Wyndmoor, Pennsylvania 19038

ABSTRACT: Lipases were screened for their ability to transesterify triglycerides with short-chain alcohols to alkyl esters. The lipase from *Mucor miehei* was most efficient for converting triglycerides to their alkyl esters with primary alcohols, whereas the lipase from *Candida antarctica* was most efficient for transesterifying triglycerides with secondary alcohols to give branched alkyl esters. Conditions were established for converting tallow to short-chain alkyl esters at more than 90% conversion. These same conditions also proved effective for transesterifying vegetable oils and high fatty acid-containing feedstocks to their respective alkyl ester derivatives.

JAOCs 73, 1191–1195 (1996).

KEY WORDS: Alcoholysis, alkyl esters, biodiesel, grease, lipase, rapeseed, soy oil, tallow.

There have been a considerable number of studies that report transesterification and interesterification reactions by using lipases with and without organic solvents (1–6). Recently, research has centered on the use of lipases to transesterify higher-molecular weight fatty acids to alkyl esters. Lipase-catalyzed alcoholyses of sunflower oil (7), rapeseed oil (8), soybean oil, and beef tallow (9) have been reported. The alcoholysis reactions generally involve primary alcohols with a few scattered reports on transesterifications with secondary alco-

ture properties. Another way of improving cold-temperature properties of tallow esters would be to substitute methanol with branched higher-molecular weight alcohols.

Though efficient in terms of reaction yield and time, the chemical approach to synthesizing alkyl esters (18–20) from triglycerides has drawbacks, such as difficulties in the recovery of glycerol, the need for removal of salt residue, and the energy-intensive nature of the process. On the other hand, biocatalysts allow for synthesis of specific alkyl esters, easy recovery of glycerol, and transesterification of glycerides with high free fatty acid (FFA) content. This technology could be extended to transesterification of greases, which are even less expensive than soybean oil and tallow. This process can further be used to synthesize other value-added products, including biodegradable lubricants and additives for fuel and lubricants. Lipase can also be used to introduce other functionalities into alkyl esters that may further improve the cold-temperature properties of the resulting biodiesel. In this paper, we report the lipase-catalyzed synthesis of normal and branched-chain alkyl esters of agriculturally derived triglycerides (TG): vegetable oils, tallow, and restaurant grease.

MATERIALS AND METHODS

Materials. Tallow was obtained from Chemol Corp. (Greens-

(including visual representations)

Bottlenose Dolphin ⁴⁴

Bottlenose dolphins live in the ocean all over the world. They have long bodies with two side fins and one top fin. They are gray in color. The biggest ones can be twice as long as a tall person. Even though they live in the water, dolphins breathe air. They have big brains and are very smart.

Life Cycle of a Bottlenose Dolphin

Variation in the Species ⁴⁴

Bottlenose dolphins have **variation** in size and color. The dolphins in some groups are larger than the dolphins in other groups. Bottlenose dolphins also have different-sized beaks and fins. The **genes** that give instructions for these **traits** are passed from parents to **offspring**.

Another way that bottlenose dolphins vary is that each one has its own special whistle. Dolphins can tell each other apart by their whistles.

These dolphins show variation in color and beak size.

Bottlenose Dolphin 7

Text version

By looking at fossils, Coria and other scientists can learn more about living things from long ago. On the day he helped find a new dinosaur, Coria was out in the desert. He was working with another scientist to dig up fossil bones.

Coria knows a lot about bones. He can look at the shape of a bone and figure out what kind of dinosaur it came from. He can also figure out where the bone belonged in the dinosaur's body. He can figure out whether it is a leg bone, a neck bone, or a different kind of bone.

Coria looked at the shapes and sizes of the fossil bones he had found. They looked similar to fossils from large dinosaurs that had been found before. Coria could figure out that the bones were from the lower leg and backbone of a dinosaur. He could also figure out that the dinosaur was big and walked on four legs. Coria and the scientist he was working with named the dinosaur after their country. It was a type of dinosaur no one had known about before.

Figure 1: The Standards' Model of Text Complexity

Read the samples and discuss:

What do you notice as the differences between the two texts?

Rodolfo Coria works with other scientists to study fossils.

How do scientists and engineers use text?

Reading in Amplify Science

Students are apprenticed into reading like scientists—that is, reading actively, curiously, and critically, with a focus on making meaning and using the text as a source of evidence.

Amplify Science Approach

Introduce a **phenomenon** and a related problem

Collect **evidence** from multiple sources

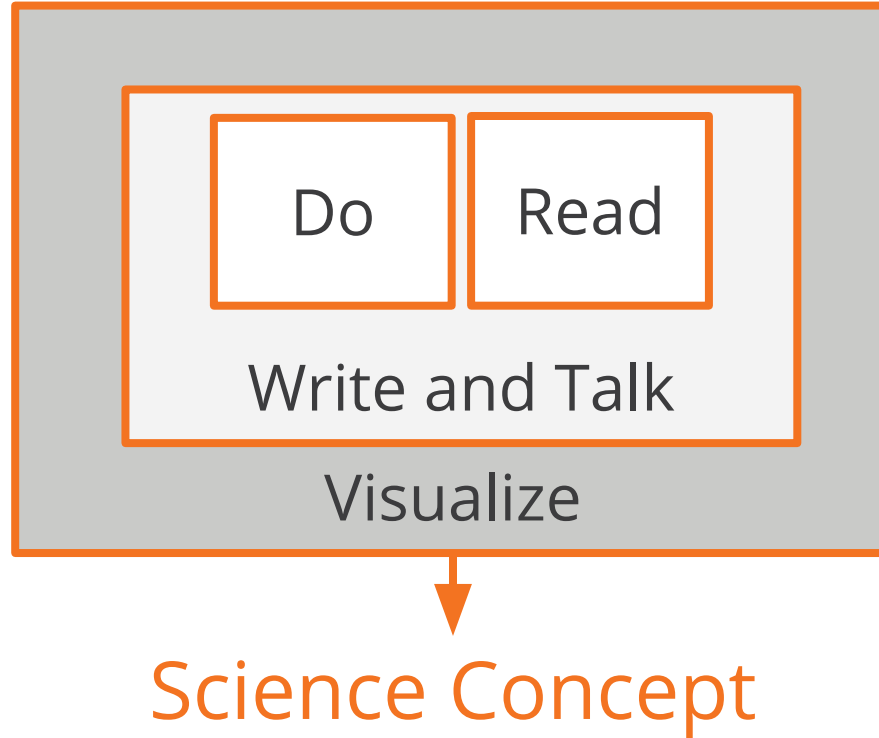

Build increasingly complex **explanations**

Apply knowledge to solve a different problem

Multimodal Instruction

Revisiting Reader and Task Measures

- Background, experience
- Purpose, assignment
- Motivation

Figure 1: The Standards' Model of Text Complexity

Text Roles are authentic to **scientific inquiry**

Set context	Connect to the outside world
Deliver content	Scientists read to learn findings
Model	Scientists replicate others' procedures and experiments
Support secondhand investigations	Scientists read and interpret others' data and findings
Support first hand investigations	Scientists use reference books

Text Roles in Amplify Science

Set context	Connect to the world outside the classroom
Deliver content	Read to learn about science
Model	Demonstrate a process or scientific practice
Support secondhand investigations	Provide data for students to interpret
Support first hand investigations	Provide information for investigations

Text roles collaborative work time **part 1**

- In pairs, choose a text from the unit
- Determine the role that the book plays in the unit
- Record key science takeaways from the text

Text	Choose one lesson it is used in and list here.	Determine the role that the book plays in a chosen lesson.	Record key science takeaways from the text

 Navigation and Materials

Let's get started! This site will provide you with the knowledge and skills you need to start teaching with Amplify Science. Here you will:

- learn to navigate the digital Teacher's Guide
- become familiar with unit resources
- get planning tips, and
- find our new, flexible remote and hybrid learning supports

This site will be continuously updated, so please check back regularly.

Step 3

Use this site as a model to prepare for delivering the lesson yourself. We've recorded! The @Home Videos will also be available in English and Spanish.

Differentiation briefs

Categories of differentiation briefs

- Embedded supports for diverse learners
- Potential challenges in this lesson
- Specific differentiation strategies for English learners
- Specific differentiation strategies for students who need more support
- Specific differentiation strategies for students who need more challenge

Planning for differentiation

Lesson #	Type of support	Instructional suggestion (summary)
1.2	Students who need more support	Anticipation guide
Which of your students might need support? When could you provide it?		
Whole class- during our shared reading block		
How would you use or modify the suggestion?		
<ul style="list-style-type: none">● Read statements aloud● Have students stand up and discuss with a partner, then put an A over their head if they agree, and D if they disagree. (Can offer "not sure" as an option).● Record responses, and revisit after reading..		

Planning for differentiation **in your unit**

- Navigate to a **reading lesson** you recently taught.
- Navigate to and read the **Differentiation section** of the Lesson Brief
- Complete the **Planning for Differentiation** for one lesson

Planning for Differentiation
Choose a lesson where a text is introduced or re-visited. What strategies will you implement for particular learners so they can engage with complex texts in a meaningful way?

Lesson #	Type of support	Instructional Suggestion (summary)
Which of your students might need support? When could you provide it?		
How would you use or modify

Inheritance and Traits:

Variation in Wolves

Investigation Notebook

Name: _____ Date: _____

Getting Ready to Read: *Blue Whales and Buttercups*

Directions:

1. Before reading *Blue Whales and Buttercups*, read the sentences below.
2. If you agree with the sentence, write an "A" on the line before the sentence.
3. If you disagree with the sentence, write a "D" on the line before the sentence.
4. After you read the book, see if your ideas have changed. Be ready to explain your thinking.

_____ All organisms are related.

_____ A blue flower and a blue bird are closely related.

_____ Plants have ways to protect th

_____ Only animals are made of cells

_____ There are not a lot of differenc
on Earth.

Name: _____ Date: _____

Multiple Meaning Words: *Blue Whales and Buttercups*

Directions:

Some words can mean more than one thing. For each word in the table:

1. Read the sentence from the book *Blue Whales and Buttercups* that uses the word.
2. Read the two meanings the word can have.
3. Decide which meaning the word has in the sentence from the book and circle that meaning in the table.

Word	Sentence from the book	Meaning 1	Meaning 2
match	It would take about 20 big elephants to match the weight of just one	a short thin piece of wood used to light a fire	to be the same as
		a flying nocturnal animal	a tool used to hit a ball
		something you find on a playground	to move along a smooth surface

Name: _____ Date: _____

Reading Reflection: *Blue Whales and Buttercups*

Directions:

1. Return to the measurements of different organisms on pages 6 and 7 of *Blue Whales and Buttercups*.
2. Answer the questions below.

Is there an object in your classroom similar in size to the wingspan of the bat (1.5 meters) (4.92 feet)?

Is there an object in your classroom similar in size to the tree frog (1 centimeter) (0.39 inches)?

Is there an object in your school similar in size to the height of the elephant (3.5 meters) (11.48 feet)?
