Supporting All Learners with Complex Texts Grades K-5

[illegible]

Amplify's Purpose Statement

Dear teachers,

You do a job that is nearly impossible and **utterly essential**.

We are in your corner – extending your reach, saving you time, and enhancing your understanding of each student.

Thank you for working with us to craft rigorous and riveting learning experiences for your classroom.

We share your goal of **inspiring all students to think deeply, creatively, and for themselves**.

Sincerely,
Amplify

Ice Breaker!

Navigation?

Question:

- On a scale from 1-5, 5 being the highest, how would you rate yourself on navigating the online curriculum?

Plan for the day

- Introduction
- Complex text: what and why
- Supporting students with complex text
- Closing

Workshop goal

How can we teach in a way that supports **all** students to meaningfully engage with complex text in Amplify Science?

Norms: Establishing a culture of learners

- **Take risks:** Ask any questions, provide any answers.
- **Participate:** Share your thinking, participate in discussion and reflection.
- **Be fully present:** Unplug and immerse yourself in the moment.
- **Physical needs:** Stand up, get water, take breaks.

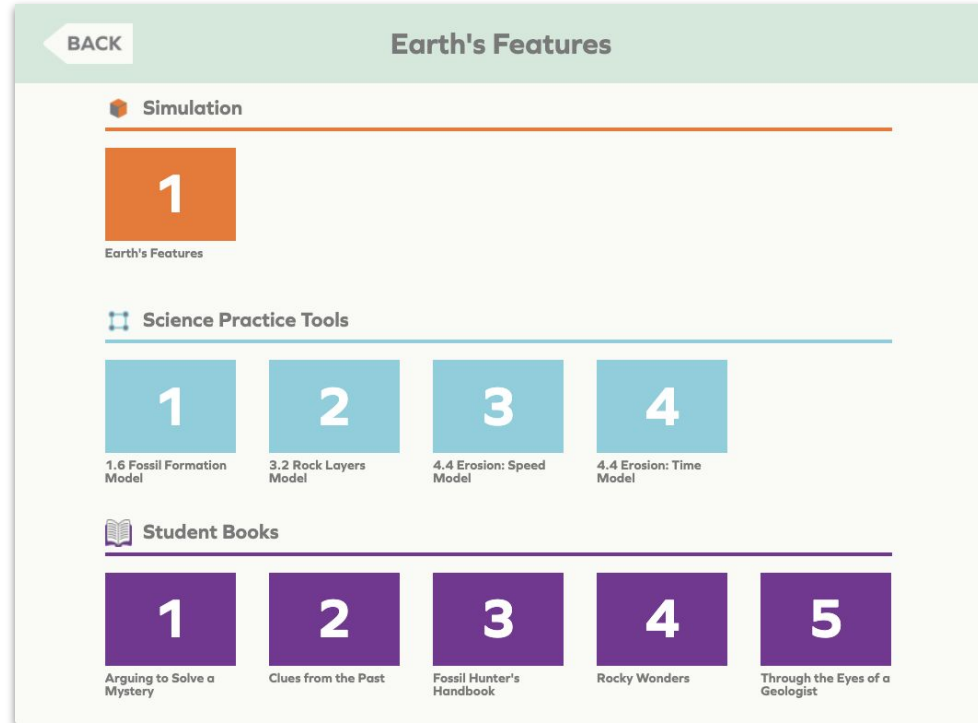

Complex text in Amplify Science

What are the books like in Amplify Science units?

Complex text in Amplify Science

- 5 texts per unit
 - 1 title is a reference book
- 18 student copies of each title included in unit kit - designed for partner reading
- (K-1) 1 big book copy of each title
- Digital copies available with interactive e-reader

Supporting All Learners with Complex Texts

1. Use the Materials and Preparation document in the Unit Guide to figure see the lessons where the books are taught.
2. Read the summary of each book in **“Books in this Unit”** to give you background information about each text.

AmplifyScience > Earth's Features

Planning for the Unit

What makes a science text complex?

Read “The Shape of a Moon’s Orbit.”

As you read, consider what could be **complex** or **challenging** about this science text.

THE SHAPE OF A MOON’S ORBIT

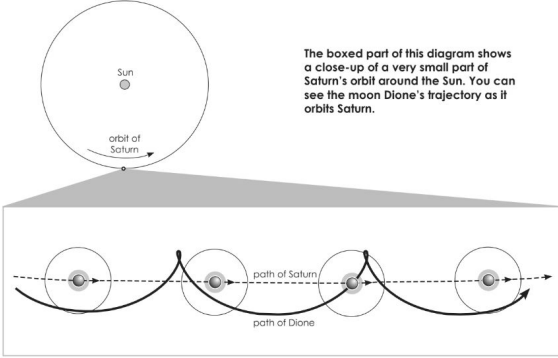

Dione, a moon of Saturn

When is a circle not a circle? Many objects in the Solar System move in orbits that are very circular. For instance, Dione is a moon that moves around the planet Saturn in an orbit that is almost a perfect circle. It seems perfectly logical to say that the trajectory of Dione is circular. But is it really?

While Dione is circling around Saturn, Saturn is not sitting still. Saturn is moving around the Sun. The gravitational pull of the Sun affects Saturn and all its moons, so they all move around the Sun together. Saturn moves in an orbit that is almost a perfect circle, but what kind of trajectory does a moon like Dione follow?

The path of a moon around the Sun can be quite complicated. It depends on how fast the planet is moving, how fast the moon is orbiting, and how far away the moon is from the planet. Dione moves around the Sun in a wavy path that makes a little loop every time it orbits around Saturn. Every time Saturn orbits the Sun once, Dione orbits Saturn about 3,931 times, so the trajectory that Dione follows is an intricate path with thousands of waves and loops.

The boxed part of this diagram shows a close-up of a very small part of Saturn’s orbit around the Sun. You can see the moon Dione’s trajectory as it orbits Saturn.

The diagram illustrates the complex trajectory of a moon like Dione around the Sun. At the top, the Sun is shown as a small circle. A large circle represents Saturn's orbit around the Sun. Below this, a rectangular box provides a magnified view of a small segment of Saturn's orbit. Within this box, Saturn's path is shown as a dashed line with small loops, and Dione's path is shown as a solid line with many more frequent, tighter loops. To the right of the main text, there are two circular images: the top one is labeled 'Dione, a moon of Saturn' and the bottom one is labeled 'LHS'.

What makes a science text complex?

- Specialized vocabulary
- Sophisticated content that requires background knowledge
- Complex visual representations
- Sentence structure
- Density of content

Scientists and complex text

What types of texts do scientists use?

How do scientists engage with text?

Disciplinary literacy

The specialized reading practices and strategies required to make sense of the unique types of text found within a discipline.

Traditional model of literacy 'stages' in school

Disciplinary literacy:

specialized strategies to
access discipline's texts

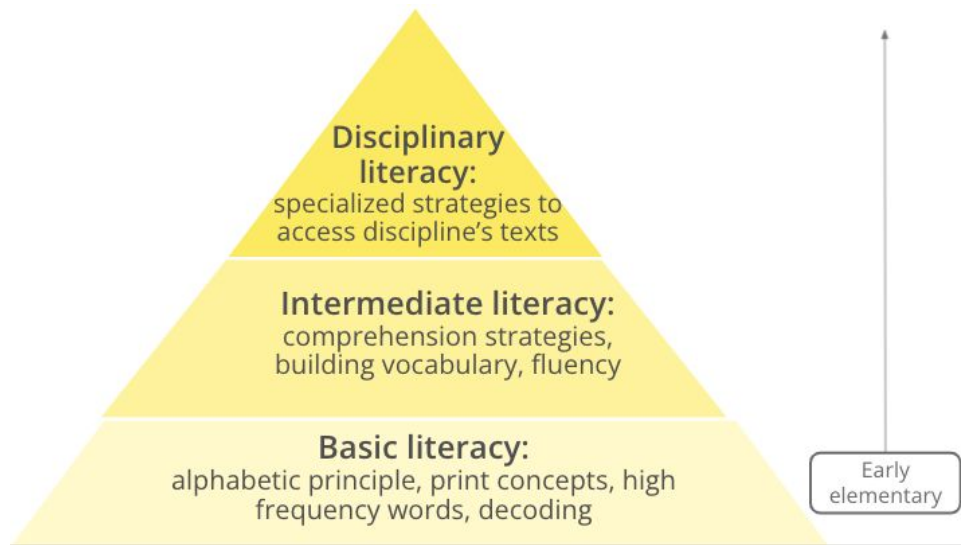

Intermediate literacy:
comprehension strategies,
building vocabulary, fluency

Basic literacy:
alphabetic principle, print concepts, high
frequency words, decoding

Early
elementary

Problems with this model

- Gaps in students' basic and intermediate literacy in upper grades
- Lack of explicit disciplinary literacy instruction across subject areas

A new model

Integration of literacy stages

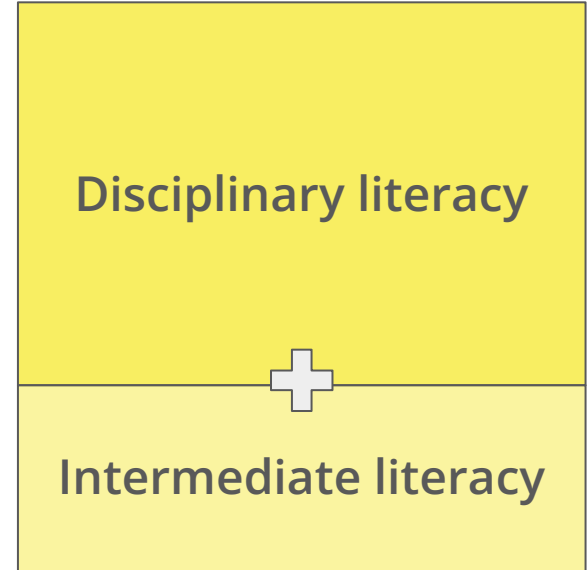

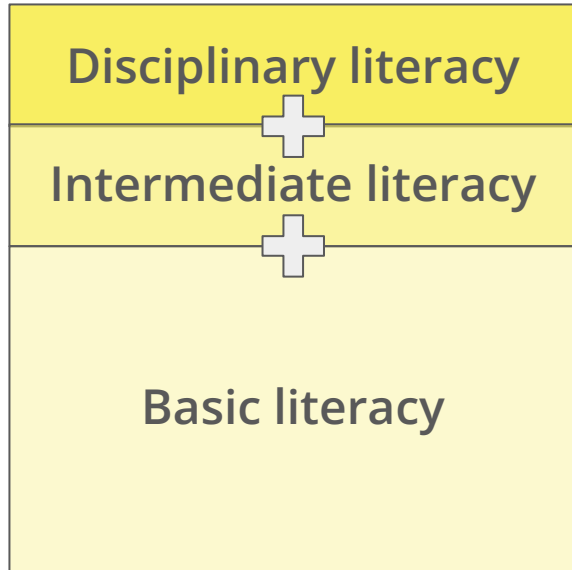

- Explicit disciplinary literacy instruction at all grade levels
- Sustained basic and intermediate literacy instruction at all grade levels

Integration of literacy stages

Early
elementary

High school

Complex text and disciplinary literacy

Reflection

How did you leverage
discipline-specific reading skills
when you read “The Shape of a
Moon’s Orbit”?

How did you read like a scientist?

THE SHAPE OF A MOON’S ORBIT

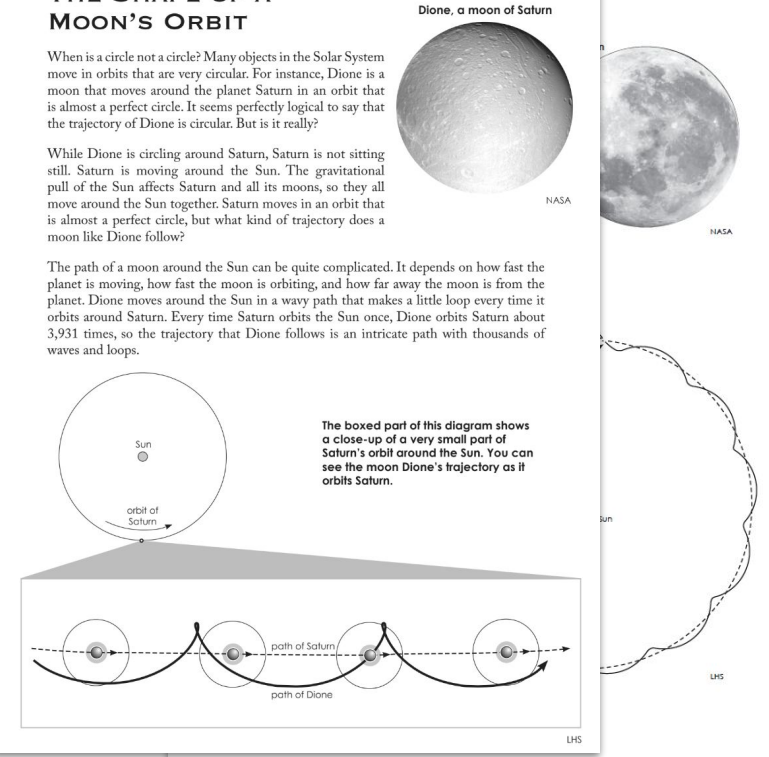

Dione, a moon of Saturn

When is a circle not a circle? Many objects in the Solar System move in orbits that are very circular. For instance, Dione is a moon that moves around the planet Saturn in an orbit that is almost a perfect circle. It seems perfectly logical to say that the trajectory of Dione is circular. But is it really?

While Dione is circling around Saturn, Saturn is not sitting still. Saturn is moving around the Sun. The gravitational pull of the Sun affects Saturn and all its moons, so they all move around the Sun together. Saturn moves in an orbit that is almost a perfect circle, but what kind of trajectory does a moon like Dione follow?

The path of a moon around the Sun can be quite complicated. It depends on how fast the planet is moving, how fast the moon is orbiting, and how far away the moon is from the planet. Dione moves around the Sun in a wavy path that makes a little loop every time it orbits around Saturn. Every time Saturn orbits the Sun once, Dione orbits Saturn about 3,931 times, so the trajectory that Dione follows is an intricate path with thousands of waves and loops.

The boxed part of this diagram shows a close-up of a very small part of Saturn’s orbit around the Sun. You can see the moon Dione’s trajectory as it orbits Saturn.

The diagram illustrates the complex trajectory of a moon like Dione around the Sun. It starts with a large circle representing the Sun. A smaller circle represents Saturn's orbit around the Sun. A dashed line shows the path of Saturn, which is nearly circular. A solid line shows the path of Dione, which is a wavy line that loops around Saturn's path. A boxed area provides a close-up of a small portion of Saturn's orbit, showing the intricate, looping path of Dione as it orbits Saturn. The diagram is labeled with 'Sun', 'orbit of Saturn', 'path of Saturn', and 'path of Dione'. It also includes images of Dione and the Moon, and credits NASA and LHS.

- Class discussion
- Discourse routines

Partner Reading

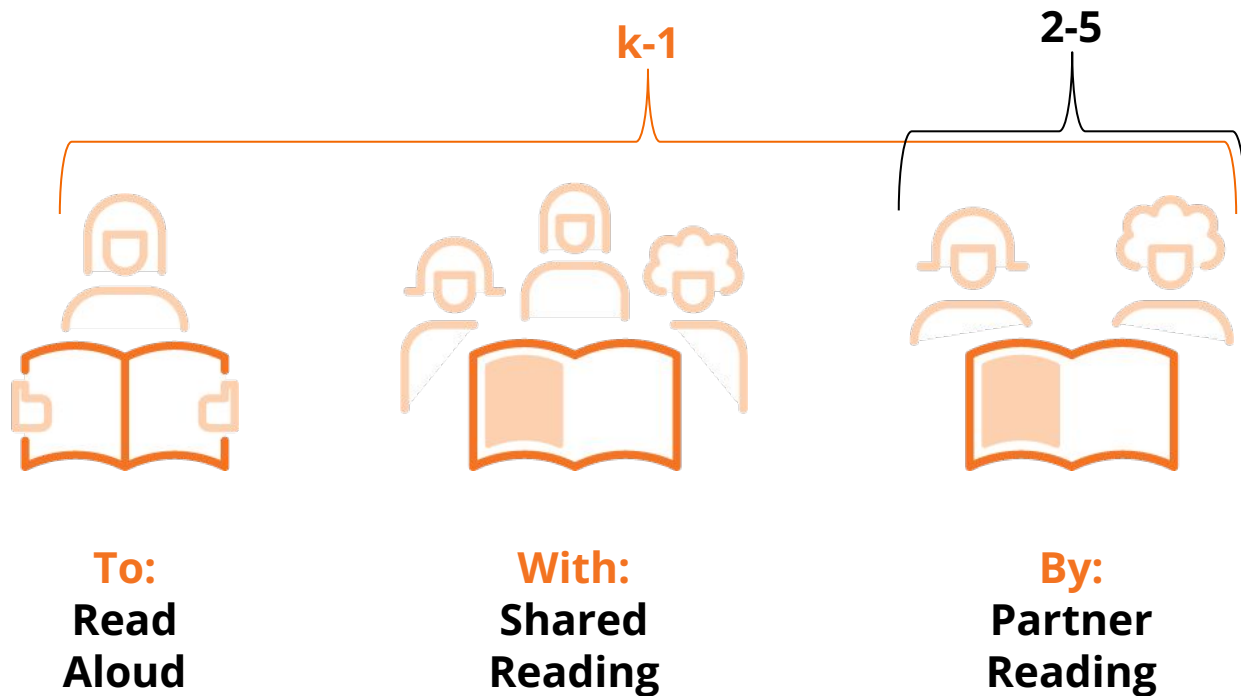

2-5

Partner Reading Guidelines

1. Sit next to your partner and place the book between you.
2. Take turns reading.
3. Read in a quiet voice.
4. Be respectful and polite to your partner.
5. Ask your partner for help if you need it. Work together to make sure you both understand what you read.

Modes of Reading in Amplify Science

Read Aloud

K-1

Light and Sound- Grade 1

Teacher action:

Read pages 4–5 out loud.

Suggested teacher talk:

I read a question here: *Is there any light in the theater?* I have another question because there is something I do not understand. I think there is light in the theater because I see light in the illustration. The thing I do not understand—or my question—is *Where is the light coming from?*

Suggested teacher talk:

I am going to keep reading to find an answer to my question.

Think of a movie theater. You walk in after the movie starts. It is hard to see, but you can still find a seat. You can see a little bit. Is there any light in the theater?

Shared Reading

K-1

Here is what a scientist or engineer would say:

The wagon and Faheem moved because Francis exerted a force on the wagon.

8

Pushes and Pulls- Grade K

Teacher action:

Read the first paragraph on page 7, and then pause to think out loud to model visualizing a pull. Talk about what you visualize and include a pulling hand motion in which you pull your hands toward your body. Ask students to gesture with their hands the movement of pulling a wagon.

Partner Reading

Activity 2

Read the book and mark examples of forces you find with sticky notes.

Forces All Around- Grade 3

K-5

Instructional supports

Sense-making strategies: How are students reading?

- Setting a purpose
- Visualizing
- Making predictions
- Asking questions
- Making inferences
- Synthesizing

Example: Grade 3

Making Inferences

1

Lesson 1.3: Earthworms Underground

Activity 1

In order to help you understand what you read, you will make some **inferences** as you read.

In reading, an inference is **something you figure out** based on what you read and what you already know.

© The Regents of the University of California. All rights reserved.

3

Lesson 1.3: Earthworms Underground

Activity 1

We read that **earthworms** can survive and meet their needs **underground**. We already know that one need organisms have is getting food.

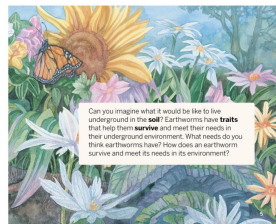

So we can figure out, or **make an inference**, that earthworms get their food underground.

© The Regents of the University of California. All rights reserved.

2

Lesson 1.3: Earthworms Underground

Activity 1

Turn to page 5.

Follow along as I read this page out loud.

© The Regents of the University of California. All rights reserved.

4

Lesson 1.3: Earthworms Underground

Activity 2

Discussing Inferences

I read that _____.

I already know that _____.

So, my inference is _____.

Use these sentence starters and what you wrote in your notebook to **discuss one inference** you made.

© The Regents of the University of California. All rights reserved.

The screenshot displays the AmplifyScience interface for Lesson 1.2, titled "Clues from the Past". The interface includes a navigation bar at the top with the AmplifyScience logo and a breadcrumb trail: "Earth's Features > Chapter 1 > Lesson 1.2". Below the navigation bar is a large header image of a dinosaur skull with the lesson title "Lesson 1.2: Clues from the Past". A horizontal navigation bar below the header contains four tabs: "Lesson Brief (4 Activities)", "1 TEACHER-LED DISCUSSION Introducing Observations and Inferences", "2 TEACHER-LED DISCUSSION Preparing to Read Clues from the Past", and "4 STUDENT-TO-STUDENT DISCUSSION Sorting Observations and Inferences". The "Lesson Brief" tab is currently selected. Below the navigation bar, there are two buttons: "RESET LESSON" and "GENERATE PRINTABLE LESSON GUIDE". The main content area is divided into three sections: "Overview", "Digital Resources", and a sidebar. The "Overview" section contains a paragraph about the lesson's focus on observation and inference. The "Digital Resources" section lists several resources: "Classroom Slides 1.2 | PowerPoint", "Classroom Slides 1.2 | Google Slides", "All Projections", "Partner Reading Guidelines", and "Observation and Inference Cards". The sidebar on the left contains a list of links: "Overview", "Materials & Preparation", "Differentiation", "Standards", "Vocabulary", and "Unplugged?". An orange arrow points from the "Differentiation" link in the sidebar to the "Differentiation" section of the main content area.

RESET LESSON | GENERATE PRINTABLE LESSON GUIDE

Overview

In this lesson, students are introduced to observation and inference and look at the way geologists use them in their work. First, students familiarize themselves with observations and inferences through an everyday example: an image of a nest with pieces of eggshell inside. They describe what they observe and infer what may have happened. Next, the teacher introduces *Clues from the Past* and invites students to preview images and captions to think about what geologists might observe in their work. The teacher models making inferences, then pairs of students read the book. As they read, students record the observations and inferences that the geologist in the book made. Students then apply what they have learned by working in pairs to

Rodolfo Coria works with other scientists to study fossils.

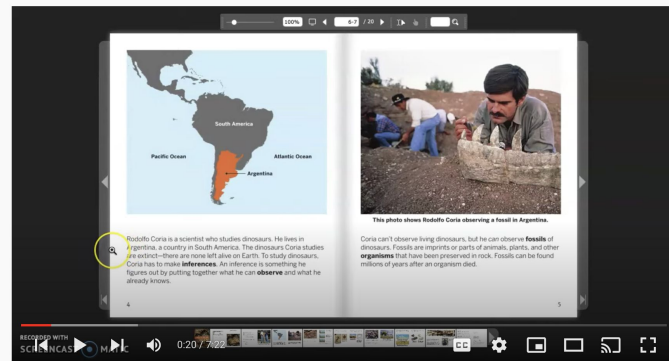

By observing fossils, Coria and other scientists can make inferences about organisms from long ago. On the day he helped discover *Argentinosaurus*, Coria was out in the desert in Argentina. He was working with another scientist to dig up fossil bones.

Coria knows a lot about bones. He can observe the shape of a bone and **infer** what kind of animal it belongs to. He can also tell where the bone belongs to whether it is a leg bone or a tail bone.
